# SERVICE GUIDE

## 1. Replacing the fuses

 This symbol located near the fuse indicates that the fuse used is fast operating type. For continued protection against fire hazard, replace with same type fuse. For fuse rating refer to the marking adjacent to the symbol.

 Ce symbole indique que le fusible utilise est a rapide. Pour une protection permanente, n'utiliser que des fusibles de même type. Ce dernier est indiqué là où le présent symbole est apposé.

CIRCUIT NO.	PART NO.	DESCRIPTION

F9003	252075	△ 2.5A-SE-EAK, Primary fuse <P>

NOTE: <D>: 120V model only      <P>: 230V model only  
 <T>: Taiwanese model only      <K>: Korean model only

## 2. To Initialize the unit

This device employs a microprocessor to perform various functions and operations. If interference generated by an external power supply, radio wave, or other electrical source results in accident which causes the specified operations and functions to operate abnormally.

To perform a result, please follow the procedure below.

1. Turn POWER button on.
2. While holding down the CD button, press the VIDEO-1 button.
3. After "clear" is displayed, the preset memory and each mode stored in the memory, such as surround, are initialized and will return to the factory settings.

## 3. Safety-check out

(Only U.S.A. model)

After correcting the original service problem, perform the following safety check before releasing the set to the customer. Connect the insulating-resistance tester between the plug of power supply cord and the screw on the back panel.

Specifications: 3.3 Mohm±10% at 500V.

## 4. Change of voltage

Worldwide models are equipment with a voltage selector to conform with local power supplies. This switch is located on the back panel.

Be sure to set this switch to match the voltage of the power supply in your area before turning the power switch on.

This switch is set to 220V at the factory. Voltage is changed by

sliding the groove in the switch with the screwdriver to the right or left. Confirm that the switch has been moved all the way to the right or left before turning the power switch on.

VOLTAGE SELECTOR

## 5. Memory preservation

This unit does not require memory preservation batteries. A built-in memory power back-up system preserves contents of the memory during power failures and even when the unit is unplugged.

The unit must be plugged in and the power switch turned on and off once in order to charge the back-up system. Note that since this is not a permanent memory, the power switch must be turned on and off a few times each month to keep the back-up system operative.

The period of the time during which memory contents are preserved after power has last been turned off varies depending on climate and placement of the unit. On the average, memory contents are protected over a period of 3 to 4 weeks (a minimum of 2 weeks) after the last time power has been turned off. This period is shortened when the unit is exposed to very high humidity or used in an area with an extremely humid climate.

## 6. Setting the tuning step frequency

Worldwide models are equipped with a step band selector switch. This switch is located on the back panel. This switch is set to 9 kHz at the factory, but may have to be reset to 10 kHz depending on the area where the unit is used.

AM band step

Europe: 9 kHz

U.S.A.: 10 kHz

AM FREQ.  
STEP

## 7. Changing the band step

With the exception of the worldwide models, a tuning step selector switch is not provided. When you change the band step, change the parts as shown below.

#### 2. Outputs

Connect the non-inductive type resistor of 8 ohms to the all speaker terminals unless otherwise noted.

## IDLING CURRENT ADJUSTMENT

When replaced the power amplifier transistors, you should proceed to adjust the idling current adjustment.

Turn the trimming resistors R5022, R5122, R5222, R5322 and R5422 counter-clockwise to set to the minimum position.

Connect DC voltmeter to the test terminals P5091a, P5191a, P5291a, P5391a, P5491a and P5591a.

Turn POWER switch "ON". Adjust the above trimmer resistors so that the reading of voltemter becomes  $2.0\pm0.3$ mV.

After adjustment, attach the top cover.

After aprrox. 5 minutes, adjust the above trimmers so that reading of voltmeter becomes  $7.5\pm0.5$ mV.

Turn POWER switch "OFF".

NOTE: The Idling current adjustment should be proceed at cool conditions.

## MICROPHONE LEVEL

When the analyzer microphone is replaced, you should adjust the sensitivity and frequency correction of microphone.

### Preparation

Cassette deck, Amplifier, Speaker system, Sound level meter (Part No. 0J11)

Monitor TV

You are necessary to adjust at the place which the sound level is less than 55dB.

### Adjustment

1. Connect the cassette deck to the PREOUT L on the rear panel of unit.
2. Insert the blank tape in the cassette holder.
3. Press TEST button on the remote controller.
4. Record 1 kHz pink noise on the tape.
5. Connect the cassette deck to the PREOUT of SUBWOOFER on the rear panel of unit.
6. Press the ENTER button on the remote controller to display the Menu screen.  
Press the PARAMETER buttons to select the Bass Peak Level.(Refer to the page 33 on the instruction manual.) Press PARAMETER button **▶** to play the test signal
7. Record 40 Hz pink noise on the tape.
8. Connect the cassette deck and speaker system to the terminal on amplifier.
9. Set the sound level meter to the approx. 1m position from speaker system.  
When speaker system is small, set the sound level meter to the near of cap of woofer as shown below.

10. Play 1 kHz pink noise.
11. Turn VOLUME on the amplifier so that the indication of meter becomes 75dB.
12. Press CD and SPEAKER A buttons at the same time to set to the TEST mode.
13. Press VIDEO-4 button.
14. Turn VOLUME on the amplifier so that the indication of meter becomes 75dB.
15. Insert the microphone to the terminal ANALYZER on the unit and put the microphone to the same position.
16. Adjust Trimming resistor R3401 so that the indication of FL tube becomes 0dB.
17. Play 40 Hz pink noise.
18. Turn VOLUME on the amplifier so that the indication of meter becomes 75dB.
19. Press MULTI SOURCE button.
20. Adjust Trimming resistor R3402 so that the indication of FL tube becomes 0dB.
